PARSING 3- PREDICTIVE PARSING

Download exercises

1. Go to

<https://ligerlabs.org/compilers.html>

2. Download the file

`parse-3-exercises.zip`

3. Open up a terminal and Unzip the file

```
> unzip parse-3-exercises.zip
```

```
> cd parse-3-exercises
```

```
> ls
```

Task 1

- For this grammar
 1. Generate the predictive parse table
 2. Show the actions of the interpreter for the input strings "xyz" and "y".

1. $S \rightarrow A B C$
2. $A \rightarrow x$
3. $A \rightarrow \epsilon$
4. $B \rightarrow y$
5. $C \rightarrow z$
6. $C \rightarrow \epsilon$

$\text{FIRST}(S) = \{x, y, \epsilon\}$

$\text{FIRST}(A) = \{x, \epsilon\}$

$\text{FIRST}(B) = \{y\}$

$\text{FIRST}(C) = \{z, \epsilon\}$

$\text{FOLLOW}(S) = \{\$ \}$

$\text{FOLLOW}(A) = \{y\}$

$\text{FOLLOW}(B) = \{z, \$ \}$

$\text{FOLLOW}(C) = \{\$ \}$

Task 2

- For this grammar
 1. Generate the predictive parse table
 2. Show the actions of the interpreter for the input strings "yyy".

$$1. S \rightarrow yAB$$

$$2. A \rightarrow y$$

$$3. A \rightarrow z$$

$$4. B \rightarrow y$$

$$5. B \rightarrow \epsilon$$

$$\text{FIRST}(S) = \{y\}$$

$$\text{FIRST}(A) = \{y, z\}$$

$$\text{FIRST}(B) = \{y, \epsilon\}$$

$$\text{FOLLOW}(S) = \{\$ \}$$

$$\text{FOLLOW}(A) = \{y, \$ \}$$

$$\text{FOLLOW}(B) = \{\$ \}$$

Task 3

- Show the actions of the interpreter on the expression grammar for this input.

stack

	<u>id</u>	<u>+</u>	<u>*</u>	<u>(</u>	<u>)</u>	<u>\$</u>
E	$E \rightarrow TE'$			$E \rightarrow TE'$		
E'		$E' \rightarrow \underline{+}TE'$			$E' \rightarrow \epsilon$	$E' \rightarrow \epsilon$
T	$T \rightarrow FT'$			$T \rightarrow FT'$		
T'		$T' \rightarrow \epsilon$	$T' \rightarrow \underline{*}FT'$		$T' \rightarrow \epsilon$	$T' \rightarrow \epsilon$
F	$F \rightarrow \underline{id}$			$F \rightarrow \underline{(E)}$		

Task 4

- Show the actions of the interpreter on the expression grammar for this input.

stack

	<u>id</u>	<u>+</u>	<u>*</u>	<u>(</u>	<u>)</u>	<u>\$</u>
E	$E \rightarrow TE'$			$E \rightarrow TE'$		
E'		$E' \rightarrow \underline{+}TE'$			$E' \rightarrow \epsilon$	$E' \rightarrow \epsilon$
T	$T \rightarrow FT'$			$T \rightarrow FT'$		
T'		$T' \rightarrow \epsilon$	$T' \rightarrow \underline{*}FT'$		$T' \rightarrow \epsilon$	$T' \rightarrow \epsilon$
F	$F \rightarrow \underline{id}$			$F \rightarrow \underline{(E)}$		

Task 5

- For this grammar
 1. Compute FIRST and FOLLOW
 2. Generate the predictive parse table
- Do you notice something weird about this parse table? Explain!
- This grammar models C's if-then-else statement: i=if, t=then, e=else, and A represents the options else part.

1 . S	→	<u>i</u> E <u>t</u> S A
2 . S	→	<u>x</u>
3 . A	→	<u>e</u> S
4 . A	→	<u>ε</u>
5 . E	→	<u>y</u>

Task 6

- For this grammar
 1. Compute FIRST and FOLLOW
 2. Generate the predictive parse table

1.	S	A	B	C	
2.	S	→	ε		
3.	A	→	A	S	
4.	A	→	ε		
5.	B	→	x	B	y
6.	B	→	ε		
7.	C	→	z	C	
8.	C	→	w		

Task 7

- For this grammar
 1. Compute FIRST and FOLLOW
 2. Generate the predictive parse table
 3. Show the actions the parser takes on the input "bcba"

1.	S	\rightarrow	x	A	x
2.	S	\rightarrow	B	A	x
3.	S	\rightarrow	ϵ		
4.	A	\rightarrow	z	A	
5.	A	\rightarrow	y	A	
6.	A	\rightarrow	ϵ		
7.	B	\rightarrow	y		

ALGORITHMS

Computing FIRST Sets (no $A \rightarrow \epsilon$ rules)

1. **FOR** each non-terminal A **DO**

$\text{FIRST}(A) = \{\}$

2. **FOR** each terminal t **DO**

$\text{FIRST}(t) = \{t\}$

3. **REPEAT** until no more changes:

FOR each production $A \rightarrow Y_1 \dots Y_k$ **DO**

$\text{FIRST}(A) \cup= \text{FIRST}(Y_1);$

Computing FIRST Sets (with $A \rightarrow \epsilon$ rules)

1. **FOR** *each non-terminal* A **DO** $\text{FIRST}(A) = \{\}$
2. **FOR** *each terminal* t **DO** $\text{FIRST}(t) = \{t\}$
3. **FOR** *each production* $A \rightarrow \epsilon$ **DO** $\text{FIRST}(A) = \{\epsilon\}$
4. **REPEAT** until no more changes:
 - FOR** *each production* $A \rightarrow Y_1 \dots Y_k$ except $A \rightarrow \epsilon$ **DO**
 $\text{FIRST}(A) \cup= \text{FIRST}(Y_1) - \{\epsilon\};$
 FOR $i = 1$ to $k-1$ **DO**
 IF ϵ is in $\text{FIRST}(Y_1) \wedge \dots \wedge \epsilon$ is in $\text{FIRST}(Y_i)$ **THEN**
 $\text{FIRST}(A) \cup= \text{FIRST}(Y_{i+1}) - \{\epsilon\};$
 IF ϵ is in $\text{FIRST}(Y_1) \wedge \dots \wedge \epsilon$ is in $\text{FIRST}(Y_k)$ **THEN**
 $\text{FIRST}(A) \cup= \{\epsilon\};$

Computing FOLLOW Sets

1. **FOR** each non-terminal A **DO** $\text{FOLLOW}(A) = \{\}$

2. $\text{FOLLOW}(S) = \{\$ \}$

REPEAT until no more changes:

3. **FOR** each production $A \rightarrow \alpha B \beta$ **DO**

$\text{FOLLOW}(B) \cup= (\text{FIRST}(\beta) - \{\epsilon\})$

4. **FOR** each production $A \rightarrow \alpha B$ **DO**

$\text{FOLLOW}(B) \cup= \text{FOLLOW}(A)$

5. **FOR** each production $A \rightarrow \alpha B \beta$ **WHERE** ϵ is in $\text{FIRST}(\beta)$ **DO**

$\text{FOLLOW}(B) \cup= \text{FOLLOW}(A)$

PREDICTIVE PARSING INTERPRETER

```
curr_tok := first token  
push($); push(start symbol)  
REPEAT
```

```
    X := top()
```

Case 3

```
    IF X is curr_tok terminal OR $ THEN
```

```
        IF X=curr_tok THEN
```

```
            pop()
```

```
            curr_tok := next token
```

```
        ELSE
```

```
            error
```

Case 2

Case 4

```
        ELSE
```

```
            IF  $M[X, curr\_tok] = X \rightarrow Y_1 Y_2 \dots Y_k$  THEN
```

```
                pop()
```

```
                push( $Y_k$ ); ... push( $Y_1$ )
```

Case 1

```
            ELSE error
```

```
UNTIL X=$
```

BUILDING THE PARSE TABLE

FOR each production $A \rightarrow \alpha$ **DO**

FOR each terminal x in $\text{FIRST}(\alpha)$ **DO**

$M[A, x] \cup= \{A \rightarrow \alpha\}$

IF ϵ is in $\text{FIRST}(\alpha)$ **THEN**

FOR each terminal x in $\text{FOLLOW}(A)$ **DO**

$M[A, x] \cup= \{A \rightarrow \alpha\}$

IF ϵ is in $\text{FIRST}(\alpha)$ **AND** $\$$ is in $\text{FOLLOW}(A)$ **THEN**

$M[A, \$] \cup= \{A \rightarrow \alpha\}$

FOR all undefined entries $M[A, x]$ **DO**

$M[A, x] := \text{error}$
